

TECHNICAL PROPOSAL

MANAGED SECURITY OPERATIONS CENTER SERVICES FOR PT SENTOSA ABADI FINANSIAL

Prepared by: Elitery — Managed Security & Cloud Services

Prepared for: PT Sentosa Abadi Finansial

Date: 22 May 2026

Reference: ELT-PROP-2026-0518

1. EXECUTIVE SUMMARY

Elitery is pleased to submit this proposal to operate a 24/7 Managed Security Operations Center for PT Sentosa Abadi Finansial. As a financial technology operator supervised by OJK, Sentosa requires continuous protection of its lending platform and mobile application against an evolving threat landscape.

Elitery proposes a fully managed SOC service combining a cloud-native SIEM, an experienced analyst team operating around the clock, and a structured incident-response capability. Our service is designed to give Sentosa measurable risk reduction, regulator-ready reporting, and a predictable operational security posture. We have delivered comparable services to other regulated Indonesian enterprises and operate entirely from Indonesian data-center facilities.

We are confident that this proposal meets Sentosa's objectives and look forward to the opportunity to partner with your team.

2. COMPANY PROFILE

Elitery is an Indonesian managed-services provider established in 2011, specializing in managed cloud, disaster recovery, and managed security services. Elitery operates from Tier III data-center facilities located in Jakarta and Surabaya, all within Indonesian jurisdiction.

Elitery holds ISO/IEC 27001:2022 certification for its information security management system and is staffed by analysts and engineers holding industry certifications including CISSP, OSCP, GCIAH, and CEH. Elitery currently protects production environments for clients in banking, insurance, government, and e-commerce.

3. UNDERSTANDING OF REQUIREMENTS AND SCOPE OF WORK

Elitery has reviewed the Terms of Reference and understands that Sentosa requires continuous monitoring, detection, and response for its production environment. Our proposed scope of work is as follows.

3.1 24/7 Security Monitoring

Elitery will provide round-the-clock monitoring of Sentosa's cloud and on-premise production systems from our staffed Security Operations Center. Monitoring covers network, endpoint, application, and identity telemetry, with coverage 24 hours a day, every day of the year.

3.2 SIEM Deployment and Management

Elitery will deploy and operate a cloud-native SIEM platform. We will onboard log sources across Sentosa's in-scope systems, develop correlation rules tuned to the financial-services threat model, and continuously refine detection content to reduce false positives.

3.3 Incident Response

Elitery operates a documented incident-response process aligned with NIST guidance. Our analysts triage alerts, classify incident severity, and coordinate containment and recovery. For CRITICAL incidents, Elitery commits to acknowledge within 15 minutes and to begin containment within 30 minutes, at any time of day.

3.4 Reporting

Elitery will provide a monthly executive security report summarizing incidents, trends, and posture, and will hold a quarterly service-review meeting with Sentosa management.

3.5 Threat Intelligence

Elitery integrates commercial and community threat-intelligence feeds into its monitoring platform, enriching detection with current indicators of compromise.

3.6 Data Residency

All Sentosa log and security data will be stored and processed exclusively within Elitery's Indonesian data-center facilities. No customer or security data will leave Indonesian jurisdiction.

3.7 Compliance Alignment

Elitery's SOC operates under an ISO/IEC 27001-certified management system, and our reporting is designed to support Sentosa's information-security governance obligations.

4. SERVICE DELIVERY METHODOLOGY

Elitery follows a four-phase delivery methodology: Assess, Onboard, Operate, and Improve. During Assess, we review Sentosa's environment and define in-scope assets. During Onboard, we connect log sources and validate detection coverage. During Operate, the SOC runs continuous monitoring and response. During Improve, we tune detections and review service performance with Sentosa.

Our analysts work in three shifts to maintain unbroken coverage, supported by a senior incident-response lead and a detection-engineering function that maintains and improves correlation content.

5. PROJECT TIMELINE

Elitery will transition the service in phases. We will begin with an assessment of Sentosa's environment, followed by onboarding of log sources and validation of monitoring coverage, after which the service will move into full steady-state operation. Elitery will work closely with Sentosa to complete the transition in a timely manner and will agree the detailed schedule during contract finalization.

6. PROPOSED TEAM

Elitery will assign a dedicated delivery team to the Sentosa account:

- Service Delivery Manager — single point of accountability for the service.
- SOC Lead — supervises analyst shifts and detection quality.
- Incident Response Lead — owns major-incident coordination.
- Security Analysts (Tier 1 and Tier 2) — staffed across three shifts.
- Detection Engineer — maintains SIEM correlation content.

Key personnel hold CISSP, OSCP, and GCIH certifications. Curricula vitae of key personnel are available on request.

7. RELEVANT EXPERIENCE AND REFERENCES

Elitery has delivered managed security services since 2018, giving more than seven years of operational experience in this domain. Representative engagements include managed SOC services for a national multi-finance company and security monitoring for a regional commercial bank. Client references can be provided to Sentosa during the evaluation process.

8. SERVICE LEVELS

Elitery commits to the incident-response service levels described in section

3.3. Detailed service-level definitions for monitoring availability and

reporting will be agreed with Sentosa and documented in the service agreement.

9. WHY ELITERY

Elitery combines Indonesian data-center sovereignty, an ISO 27001-certified management system, and an experienced security team. We are committed to being a responsive and transparent security partner for Sentosa.

We thank PT Sentosa Abadi Finansial for the opportunity to submit this proposal.
